

# S7 Coin

## S7 Litepaper

S7 Coin (S7) refers to Real World Asset Cryptocurrency model, to be operated based on Binance Smart Chain. It is a token-based offering and activated by transactions based on Real World Asset trading mechanisms through screened blockchain technology, a peer-to-peer transaction by encryption thus enabling the transaction to be nodded and recorded in the ledger account.

Real World Asset - RWA

# Problems We Solve

The global financial system faces challenges such as inefficiencies in asset transfer, lack of transparency, and limited accessibility to investment opportunities. Real-world assets (RWAs) remain largely illiquid and geographically constrained, limiting their potential. RWA leverages blockchain technology to tokenize these assets, creating a more inclusive and efficient financial ecosystem.

Vision: To democratize access to real-world assets and unlock their value by leveraging the power of blockchain.

Mission: To create a seamless, secure, and transparent ecosystem for tokenizing and trading RWAs globally.

Traditional financial markets face several issues:

- **Illiquidity:** Many real-world assets, such as real estate, are difficult to trade.
- **High Costs:** Asset transfer involves intermediaries and significant fees.
- **Lack of Accessibility:** Investment opportunities are often restricted to institutional players or high-net-worth individuals.
- **Limited Transparency:** Centralized systems lack the transparency needed to build trust.
